MIDSEM - 1

**PRACTICAL-EXAM**

**Practical Definition: -**

**A customer wants to spend his money for which following functions could be performed:**

- a) Take the user input for total monthly income, monthly budget for luxury expenses.**
- b) Determine the total savings and find the percentage of savings from the total monthly income. If the savings percentage is greater than 90%, it should display the message 'Select your choice' -> Home, Décor, Clothing, Accessories. In case of Home apply discount of 25%, Décor apply discount of 20%, for Clothing and accessories, apply discount of 30%.**
- c) Once the choice is done display the actual total amount invoice generated based on the selection made.**

**Note: The above program should be designed through inheritance.**

**SOLUTION**

```
import java.util.*;
class ObjectiveA
{
    double m_Income, m_Expense;
    void GetData(){
        Scanner yash1=new Scanner(System.in);
        System.out.println("\nEnter Total Monthly Income: ");
        m_Income=yash1.nextDouble();
        System.out.println("\nEnter Total Budget for Monthly Luxury Expense: ");
        m_Expense=yash1.nextDouble();
    }
}

class ObjectiveB extends ObjectiveA
{
    double Savings, Percentage, new_Expense;
    int ch;
```

```

void Calc()
{
    Savings = m_Income - m_Expense;
    Percentage = (Savings/m_Income)*100;
    Scanner yash2=new Scanner(System.in);
    if(Percentage > 90)
    {
        System.out.println("\nSelect Your Choice: \n1. Home\n2. Décor\n3.
Clothing & Accessories");
        System.out.println("\n\nEnter your choice: ");
        ch=yash2.nextInt();

        switch(ch){
            case 1:
                System.out.println("\nYou will get discount of 25%!!!");
                new_Expense = m_Expense - (0.25*m_Expense);
                break;
            case 2:
                System.out.println("\nYou will get discount of 20%!!!");
                new_Expense = m_Expense - (0.2*m_Expense);
                break;
            case 3:
                System.out.println("\nYou will get discount of 30%!!!");
                new_Expense = m_Expense - (0.3*m_Expense);
                break;
            default:
                System.out.println("\nINVALID CHOICE !!!");
                break;
        }
    }
    else
    {
        System.out.println("\nYour Savings % is less than 90%. Please Save
More.");
    }
}
}
class ObjectiveC extends ObjectiveB

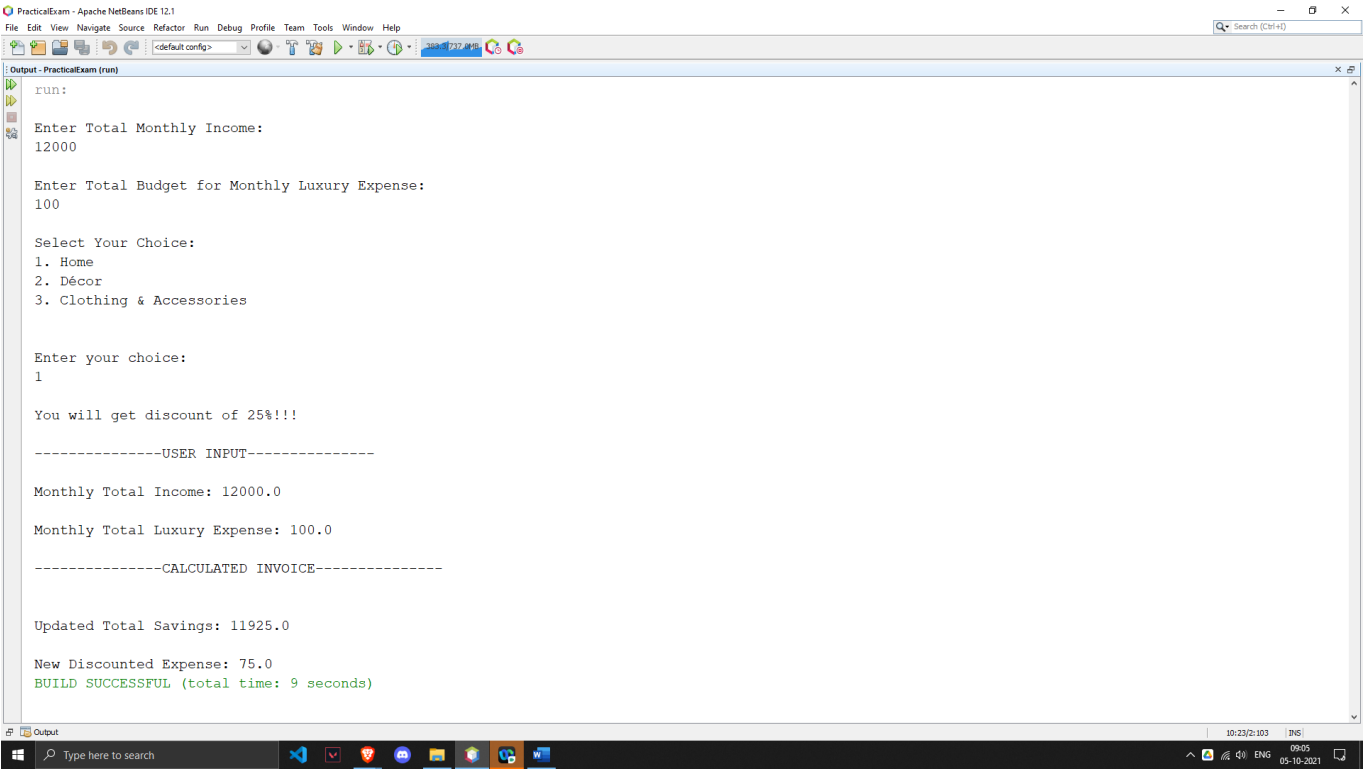

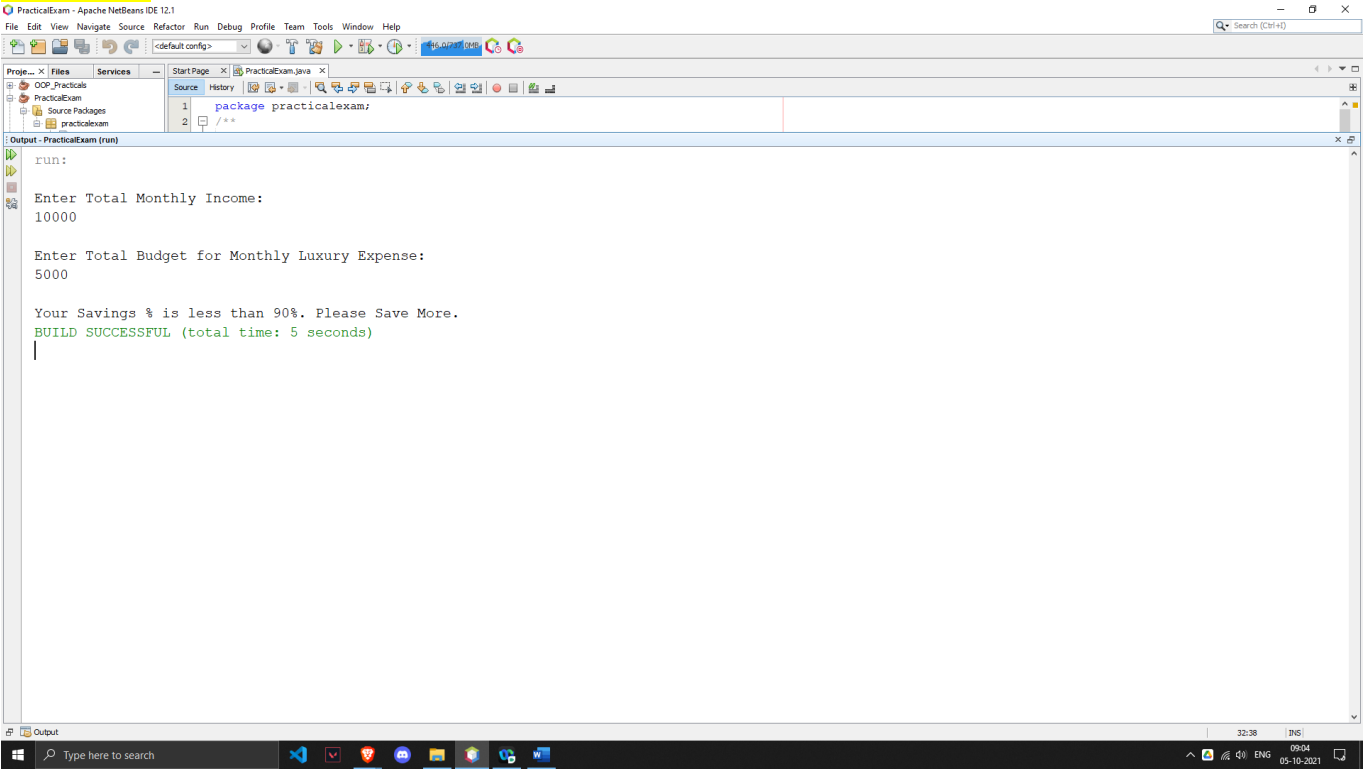

```

```
{
    void Display()
    {
        if(Percentage > 90)
        {
            System.out.println("\n-----USER INPUT-----");
            System.out.println("\nMonthly Total Income: "+m_Income);
            System.out.println("\nMonthly Total Luxury Expense: "+m_Expense);
            System.out.println("\n-----CALCULATED INVOICE-----");
            System.out.println("\n\nUpdated Total Savings: "+(m_Income-
new_Expense));
            System.out.println("\nNew Discounted Expense: "+new_Expense);
        }
    }
}

public class PracticalExam {

    public static void main(String[] args) {
        ObjectiveC obj = new ObjectiveC();
        obj.GetData();
        obj.Calc();
        obj.Display();
    }
}
```

OUTPUT

```
PracticalExam - Apache NetBeans IDE 12.1
File Edit View Navigate Source Refactor Run Debug Profile Team Tools Window Help
<default config>
Output - PracticalExam (run)
run:
Enter Total Monthly Income:
12000

Enter Total Budget for Monthly Luxury Expense:
1000

Select Your Choice:
1. Home
2. Décor
3. Clothing & Accessories

Enter your choice:
2

You will get discount of 20%!!!

-----USER INPUT-----

Monthly Total Income: 12000.0

Monthly Total Luxury Expense: 1000.0

-----CALCULATED INVOICE-----

Updated Total Savings: 11200.0

New Discounted Expense: 800.0
BUILD SUCCESSFUL (total time: 6 seconds)
