Practical -1

Objectives: To learn about Traversing and Inserting an element in an array.

- Manish is doing a job in tele calling company. He wants to add a number of assigned calls for every day. How he can implement C code using following steps (Make Suitable Assumptions):
  1. Create an array for 6 elements with data type INT. Traverse all 6 elements from an array.
  2. One day 5 employees took leave all of sudden due to COVID-19. So Manager asked Manish to do the job on Sunday as well. As he needs to update the records of his assigned call. So how can he add one more array element at the last position and print an updated array list on screen.
